METAL FACADES

Metal facades enhance the appearance of buildings and bring a unique architectural dimension to every project.

PERFORATED FACADES

Perforated metal facades are an integral part of contemporary architecture and represent a modern design element for all types of buildings.

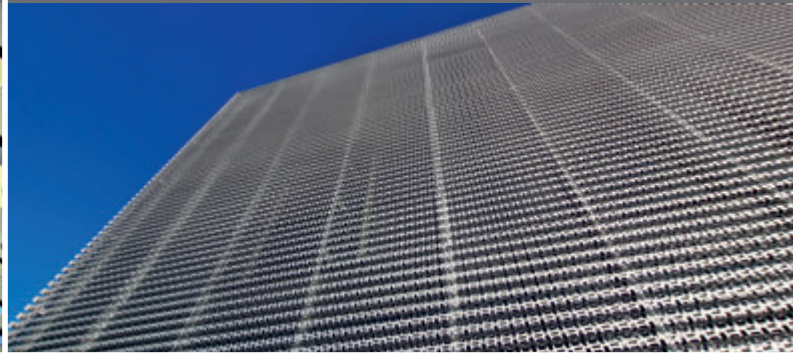

METAL CEILINGS

AVG METAL offers materials and fabrication for suspended metal ceilings, aluminium ceiling systems, and decorative ceiling solutions with unique architectural character.

DESIGN PERFORATED SHEETS AND PANELS

Custom-designed perforated metal sheets and panels with standard or bespoke perforation patterns and embossing create exceptional features for modern architecture.

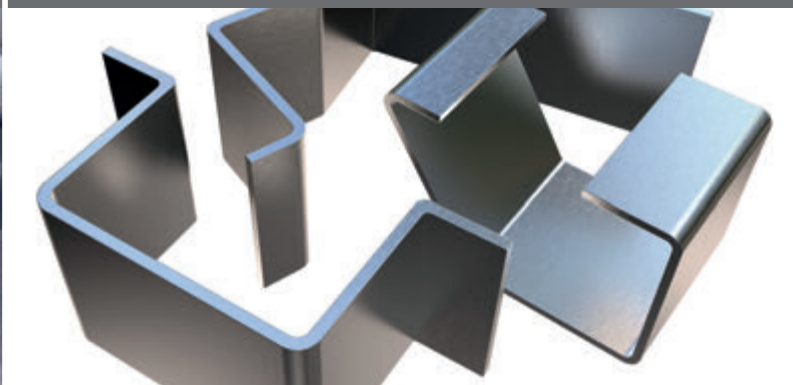

EMBOSSED METAL SHEETS

Embossed metal sheets provide architectural designs with distinctive surface textures and three-dimensional visual effects.

METAL PROFILES

AVG METAL offers a wide range of steel, aluminum, and stainless-steel profiles in C, L, U, Z, and Ω shapes for industrial and construction applications.

INTERIOR METAL CLADDING

AVG METAL manufactures and supplies interior metal wall and ceiling cladding systems that form an essential part of modern architectural design.

ARCHITECTURAL IMAGE PERFORATIONS

Architectural image perforation technology enables the creation of customized graphics, photographs, logos, and artistic patterns on metal surfaces, delivering a distinctive visual identity for every project.

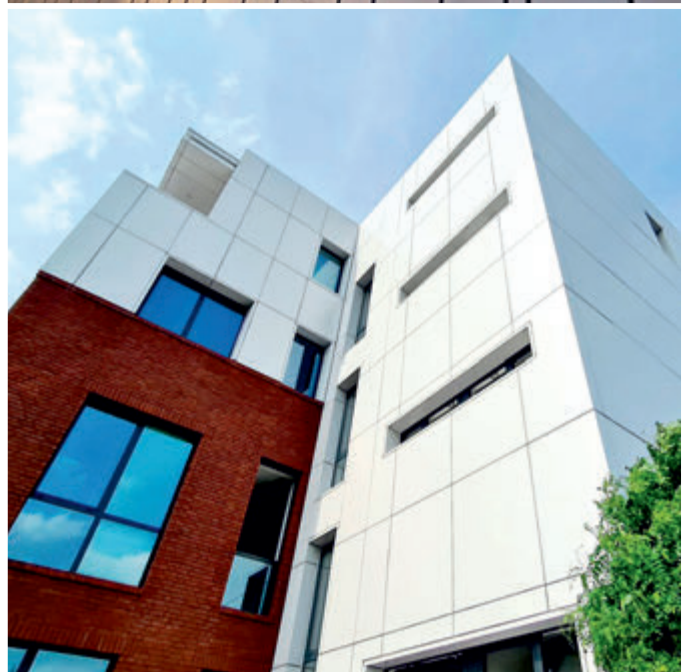

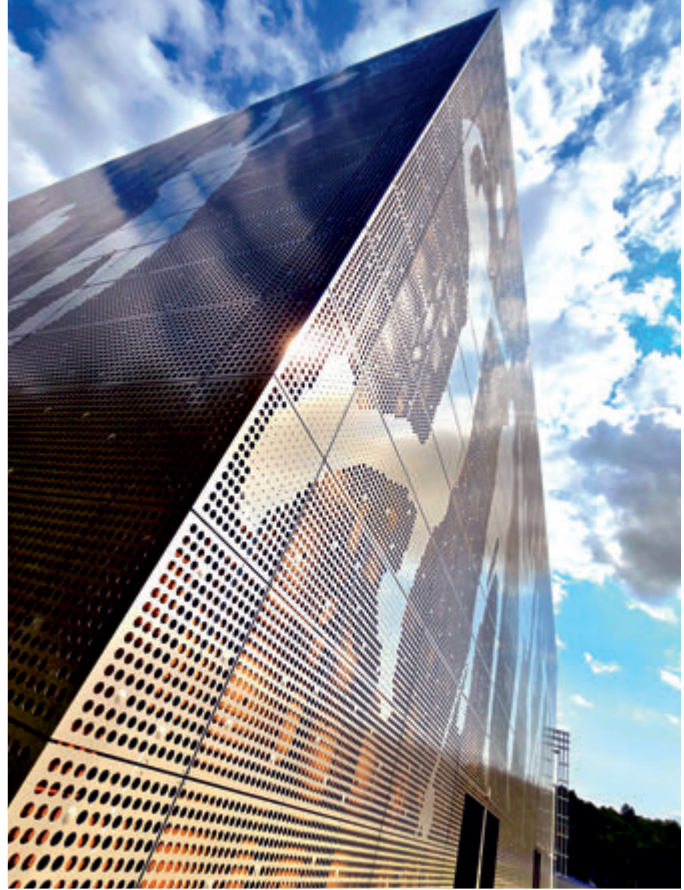

METAL BECAME PART OF OUR IDENTITY

AVG METAL manufactures metal facades, cladding systems, and architectural profiles in a wide range of system solutions and applications that have become an integral part of modern and timeless architecture.

Metal facade elements and cladding systems by **AVG METAL** - including cassettes, panels, lamellas, architectural profiles, and metal sheets - can be structurally designed and manufactured precisely to meet the requirements of each project with a customized design approach.

AVG METAL provides flexible solutions. For all products, it is possible to customize the material type and thickness, dimensions (width x length x depth), installation method, fixing systems, joint configurations, and shape (regular or irregular) according to project specifications.
